PROFESSIONAL EXPERIENCE

Freelance Front-End Developer, Orlando, FL   **June 2018 – Present**

- Consumed RESTful APIs in order to display data on the front-end.
- Developed and implemented cohesive web pages for a Central Florida mechanical engineering firm using HTML5, CSS3, jQuery, and Bootstrap.
- Created wedding website using HTML5, CSS3, and ReactJS while following Agile practices.
- Demonstrates firm understanding of Git and GitHub for project version control.
- Use of CSS preprocessor SCSS for web application assignment.
- Created OAuth user authentication for web based security specifications.

InvestCloud, LLC Tampa, FL
Front-End Developer   **April 2016 – June 2018**

- Assisted with product design and implementation - Marketing site, asset tracking software
- Learned and mastered company's proprietary software.
- Improved workflow of adding and tracking private assets.
- Built and styled the specific job description for the official company marketing website.
- Involved in building and delivering a new web app that increased site traffic and client satisfaction.
- Instrumental in the set up of several servers for proper site functionality.
- Demonstrated problem solving skills when programs/services did not work correctly, causing bug on the client portal.
- Worked with other developers and leveraged tools like Fiddler to diagnose issues.
- Improved workflow of the Advisor portal family relationships app through product design and implementation.
- Updated the workflow in order to get around a page load errors.
- Created a wire-frame and built out the functionality of new workflow.
- Created a project management spreadsheet in order to keep track of 20+ active clients.
- Wrote detailed documentation for procedures and software implementation - Report Bundler, Markets applet, and IC Gray Marketing app.
- Attended to detail and achieved visual cohesion of design by debugging JS components and ensuring no spelling errors in external copy.
- Gained better understanding of networks and how data is managed by servers.
- Extracted assets from Photoshop files.

- Designed screen that allows user to add insurance assets - improve workflow in order to allow for differing variables depending on the type of insurance asset being documented.
- Leveraged previous projects in order to create a single sign on application to be added to various client marketing apps.
- Collaborated with team members in order to find the best product solution to meet client expectations.
